FIAS Colloquium

Thursday, January 15, 2015, 14:30
FIAS, Ruth-Moufang-Str. 1, 60438 Frankfurt
Lecture Hall 100

Speaker: Prof. Dr. Herbert Jaeger, MINDS, Jacobs University, Bremen

Title: Shaping the Dynamics of Recurrent Neural Networks by Conceptors

The human brain is a dynamical system whose extremely complex sensor-driven neural processes give rise to conceptual, logical cognition. Understanding the interplay between nonlinear neural dynamics and concept-level cognition remains a major scientific challenge. Here I propose a mechanism of neurodynamical organization, called conceptors, which unites nonlinear dynamics with basic principles of conceptual abstraction and logic. It becomes possible to learn, store, abstract, focus, morph, generalize, de-noise and recognize a large number of dynamical patterns within a single neural system; novel patterns can be added without interfering with previously acquired ones; neural noise is automatically filtered. Conceptors help explain how conceptual-level information processing emerges naturally and robustly in neural systems, and remove a number of roadblocks in the theory and applications of recurrent neural networks.
